INTRODUCING BERECO
High Performance Bespoke Timber Windows & Doors

Bereco is a premium supplier of high quality, high specification timber windows and doors to both the trade and retail sectors. Selling nationally, Bereco provides truly bespoke products for the prestigious new build and replacement market.

“Excellent quality product, service second to none.”
Peter Burton Taylor Wimpey South Midlands

timBER/ECO-friendly

The ‘Bereco’ brand name is derived from a combination of the words timber and eco-friendly reflecting a continued commitment to the use of environmentally friendly practices. All products are manufactured using 100% FSC timber responsibly sourced from well-managed, certified forests.

Delivering the Difference

Bereco offers a friendly, reliable approach to customer service with highly experienced knowledgeable staff to guide you through every step of the process. We offer design inspiration and technical support in combination with fully itemised quotations and detailed CAD drawings.

Choice & Flexibility

Our product ranges are second to none in the market with products supplied from the same source at the same time, sympathetically designed to incorporate an extensive collection of individual products to suit all properties. Whether you are replicating an existing design or creating a new and inspiring look we offer ironmongery, colour and design choice to complement the internal and external aesthetics of your project.

Outstanding Quality

We are committed to ensuring that high quality remains consistent throughout our entire product range. We use only the finest paint system, engineered timber, hinges, and ironmongery. The greatest aesthetical appeal is combined with ease of maintenance and superior performance. Our accreditation to the BM TRADA Q Mark Scheme is testament to the quality of our products; we are one of a limited number of manufacturers able to achieve such stringent criteria.

A GUIDE TO OUR PRODUCT RANGE

An extensive collection of product designs to suit your property style

contemporaryrange

Sleek, modern designs with the latest high performance features. Products are specifically designed for new build properties where a modern, contemporary finish is desired.

Traditional Range

Well suited to prestigious new build properties and the traditional replacement market. Designs combine modern operation with classical aesthetics that meet conservation requirements.

Heritage Range

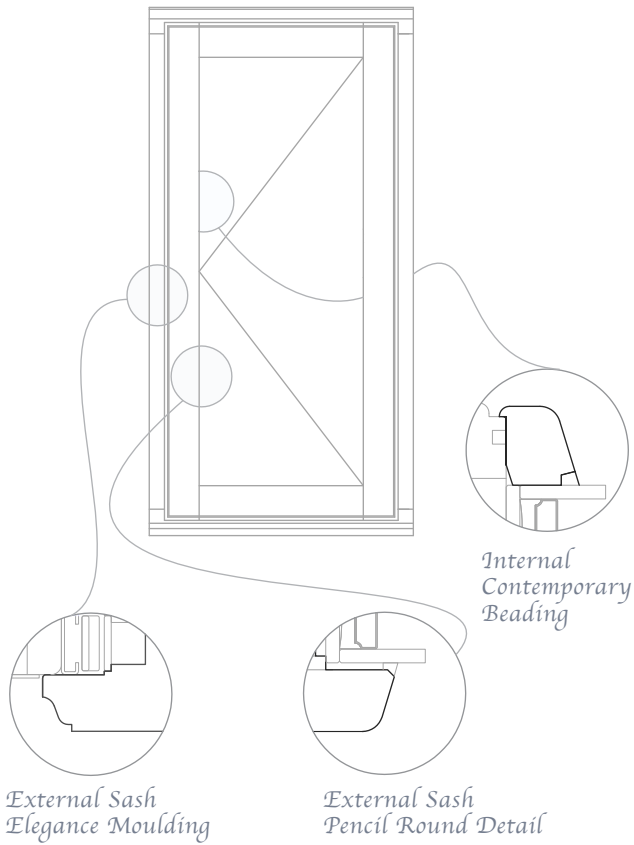

Specifically designed for listed buildings and where conservation approval is required. Designs utilise Single or Slimline glazing options with Lambs Tongue profiling, suitable for the most architecturally sensitive of projects.

ENTRANCE DOORS

Our Range of Classic, Creative and Heritage doors offer time honoured, contemporary or period door styles. Designs incorporate modern security features without compromising on aesthetics.

IRONMONGERY

Our extensive collection of exclusive ironmongery incorporates a vast assortment of design options from traditional classical pieces to the latest Italian designer styles.

Traditional Lipped Casement | RAL 9016 Traffic White | 6mm Lead Antique Black

contemporaryrange

Lipped Casement

The opening out, Contemporary Lipped Casement is the most frequently chosen timber window design in the UK. The profile is often referred to as ‘Stormproof’ reflecting a proven ability to withstand exposure to adverse weather conditions. Internally glazed with a modern concealed multi point locking system the design provides high security features compliant with Secured by Design conditions. The sash stands proud of the frame giving excellent gasket compression resulting in one of the best weather ratings on the market.

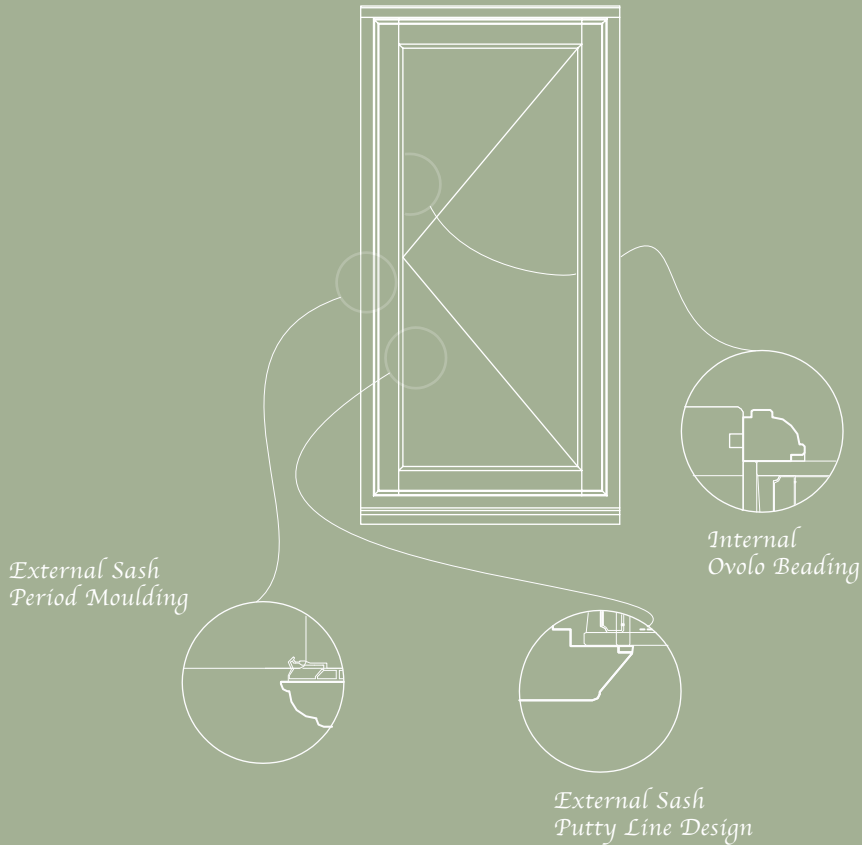

Pencil Round aesthetics create sleek visual lines offering the ideal canvas for creating a truly unique finish. This versatile window can be supplied with various design options and is suited to properties where a modern finish is desired.

Specification Ideas:

- Paint Finish: RAL 7024 Graphite Grey
- Ironmongery: Polished Chrome • Bar Pattern: Horizontal Bar 16mm • Unit Spacer: Silver
- Why not try: A Dual Colour Finish

Traditional Lipped Casement | Traditional Classic Entrance Door | RAL 9016 Traffic White | Door Leaf: RAL 9005 Jet Black | 6mm Lead Antique Black

Traditional Range

Lipped Casement

A period style window with distinctive traditional aesthetics, the Traditional Lipped Casement offers a modern method of operation with enhanced security features as standard. Creating a lipped profile the sash stands proud of the frame, ideal for period properties where extra protection from the elements is required.

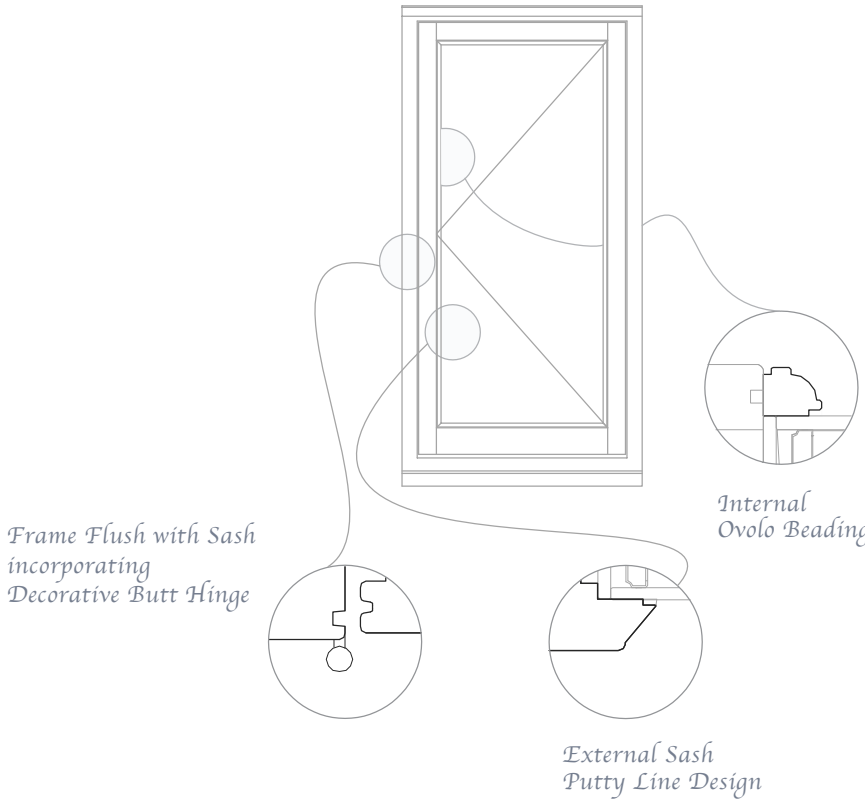

Excellent sound proofing properties are achieved with a double weather seal around the sash and friction hinges are used to provide modern functionality. Available in both top and side hung styles this period design incorporates internal Ovolo mouldings and external Putty Line design, consistent throughout the Traditional Range. Approved by conservation officers and used in English Heritage projects across the UK, the design retains traditional features whilst enhancing charm and character.

Specification Ideas:

- Paint Finish: RAL 1015 Light Ivory • Ironmongery: Satin Chrome
- Bulb End • Bar Pattern: Cottage Bar 25mm • Unit Spacer: Warm Edge, Grey
- Why not try: 6mm Silver Lead

Traditional Flush Casement | RAL 9016 Traffic White | 6mm Lead Antique Black

Traditional Range

Flush Casement

Our most traditional window, the Flush Casement, is specifically designed to replicate a period window whilst incorporating the latest modern operation and security features. Often referred to as a conservation window, the design is characterised by a sash that sits within the frame to create a flush finish externally, the perfect choice for listed properties.

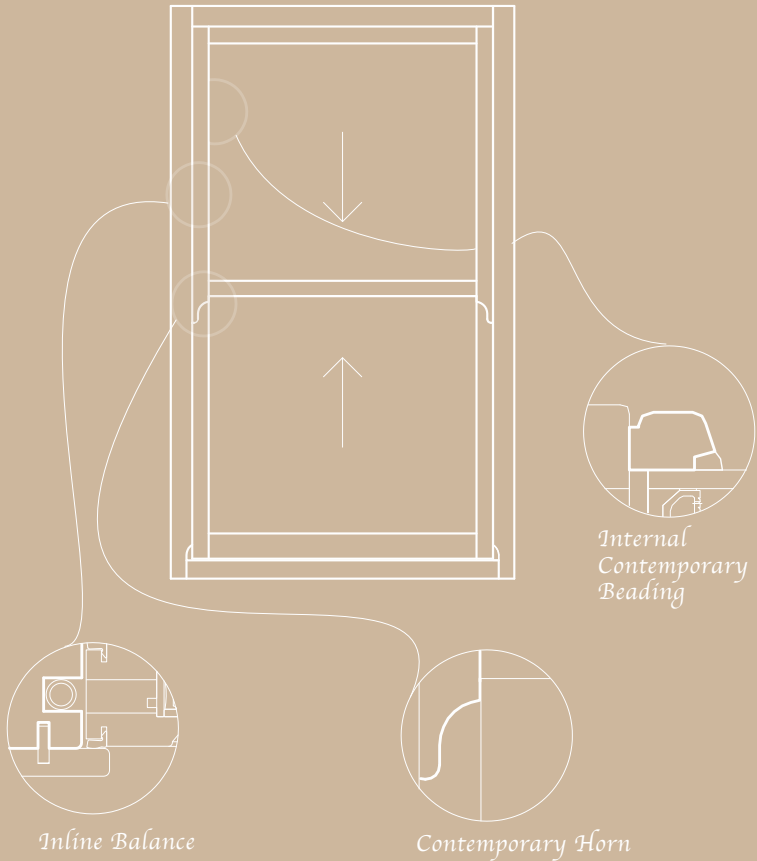

To further accentuate external features, decorative butt hinges, deeper bottom sash rails and sub cill options are incorporated into the design. Concealed hinges offer modern operation, whilst casement stays offer a traditional finish complementing ironmongery choice to match interior décor. Internal Ovolo mouldings and external Putty Line design replicate the simplistic yet elegant profiling consistent throughout the Traditional Range. Designs incorporate an openable fixed sash for ease of installation, ideal for use in refurbishment properties.

Specification Ideas:

- Paint Finish: RAL 1013 Oyster White • Ironmongery: Monkey Tail Black • Bar Pattern: Georgian Bar 16mm Lambs Tongue
- Unit Spacer: Warm Edge Black • Why not try: 6mm Antique Black Lead

Contemporary Sliding Sash Spiral Balance | RAL 9001 Cream | 16mm Bar

contemporaryrange

Sliding Sash - Spiral Balance

A modern interpretation of the original Sliding Sash window, the Contemporary Spiral Balance is ideal for new build properties combining style with high security and excellent weather ratings second to none on the market.

The latest Inline Balance technology is used to operate the window and concealed trickle vent detail offers functionality without compromising on aesthetics. To complete the sleek appearance, the Contemporary Range Spiral Balances feature Pencil Round mouldings, consistent throughout the Contemporary Range. Decorative horns sympathetically designed to match the overall appearance of the windows are included as standard to the top sash.

This design offers an energy efficient, cost effective solution whilst retaining all the unique design features of a Sliding Sash window.

Specification Ideas:

- Paint Finish: RAL 9016 Traffic White • Ironmongery: Polished Chrome • Bar Pattern: Marginal Bar 16mm • Unit Spacer: Warm Edge, White • Why not try: Deluxe Acorn Fastener, Satin Chrome

Traditional Sliding Sash Spiral Balance | RAL 9016 Traffic White | 16mm Bar (Lambs Tongue)

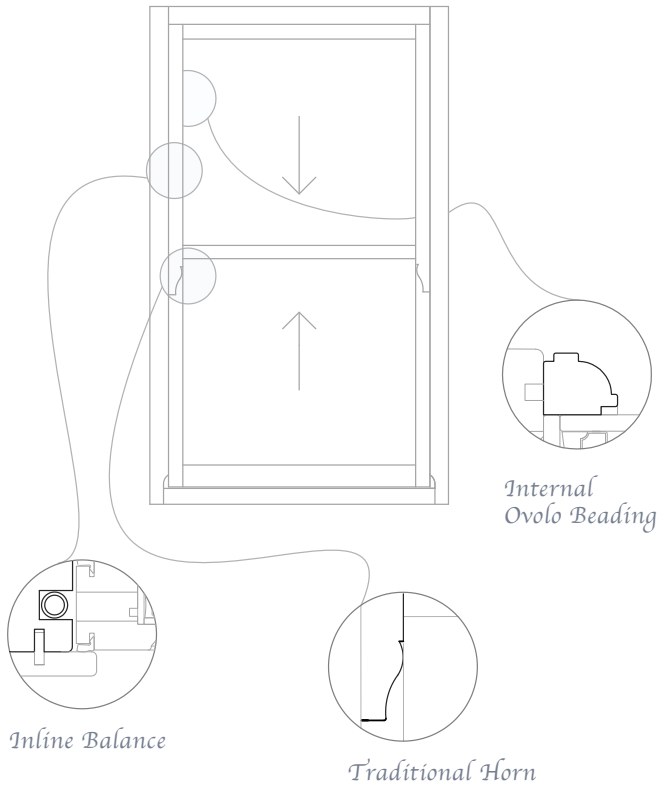

Traditional Sliding Sash Spiral Balance | RAL 9001 Cream | 25mm Bar

Traditional Range

Sliding Sash - Spiral Balance

A traditional design manufactured in a modern way, the Traditional Sliding Sash Spiral Balance combines all the features of an original Sliding Sash window with modern high performance and security features. The latest Inline Balance technology and a concealed trickle vent detail have been incorporated into the design without detracting from the windows traditional aesthetics. Attractive Angel Ventlocks™ offer simple and user friendly sash locking, easily operated by the homeowner.

Elegant period styling is combined with one of the best weather ratings for Sliding Sash on the market. External Putty Line design and internal Ovolo mouldings replicate original profiling with a traditional horn detail, exclusive to the Range. This window is ideal where a period finish is desired, enhancing a building's exterior façade and complementing interior décor.

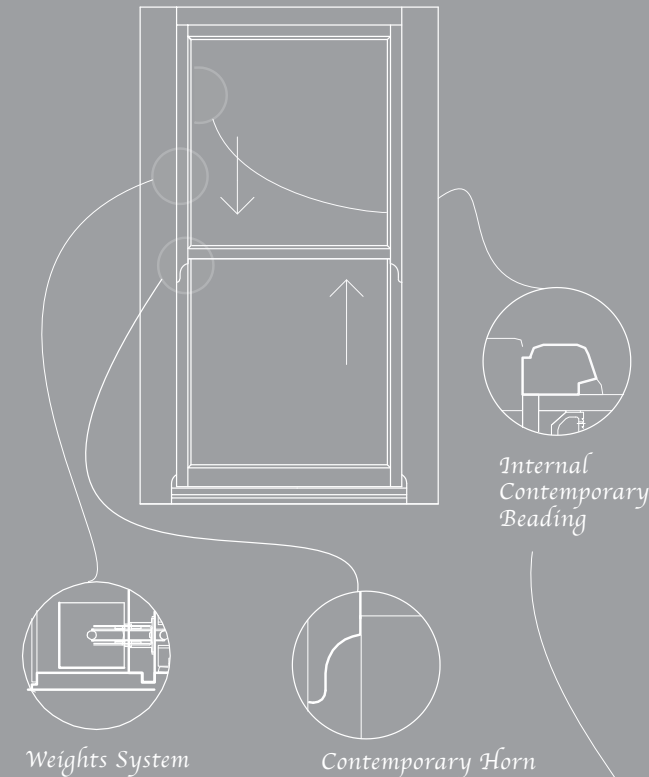

Specification Ideas:

- Paint Finish: Linen • Ironmongery: Brass • Bar Pattern: Georgian Bar 16mm Lambs Tongue
- Unit Spacer: Warm Edge, White • Why not try: Deluxe Bee-hive Fastener, Brass

Contemporary Sliding Sash Cords & Weights | RAL 9016 Traffic White | 16mm Bar

contemporaryrange

Sliding Sash - Cords & Weights

Combining a Pulley and Weight method of operation with a sleek modern profile the Contemporary Sliding Sash Cords & Weights offers a subtle mixture of old and new.

This design is ideal where specific build circumstances dictate or when conservation requirements are a consideration. Available up to 1350mm in width and 3000mm in height, a practical solution is offered for projects where much larger Sliding Sash window sizes are required. Available with an optional Simplex Easy Clean System to allow cleaning of the outer face of the sash from inside the property. With excellent weather ratings, the latest high security sash locking and hidden trickle vent detail this modern design is perfect for 21st century living.

Specification Ideas:

- Paint Finish: Parchment • Ironmongery: Polished Chrome • Bar Pattern: Vertical Bar 16mm • Unit Spacer: Silver • Why not try: Deluxe Bee-hive Fastener, Polished Chrome

Traditional Range

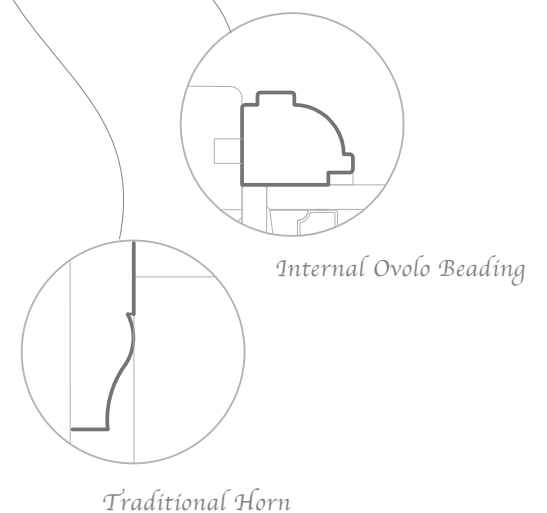

Sliding Sash - Cords & Weights

The perfect representation of an original Sliding Sash, the Traditional Cords & Weights window incorporates the same traditional method of operation as the Contemporary profile with the addition of period aesthetics. Classically styled, the design replicates the opulence and grandeur of historic sash windows.

Authentic traditional external Putty Line design and internal Ovolo mouldings accentuate the existing character of a period property. Featuring exclusive horn detail to the top sash as standard, an internal horn option to the bottom sash is available further enhancing interior decor. Offering an excellent weather and energy rating this sympathetic design incorporates high performance features without detracting from original aesthetics.

Specification Ideas:

- Paint Finish: Parlour • Ironmongery: Claw Fastener Antique Black • Bar Pattern: Georgian Bar 25mm • Unit Spacer: Warm Edge, White • Why not try: Horns to Top & Bottom Sash

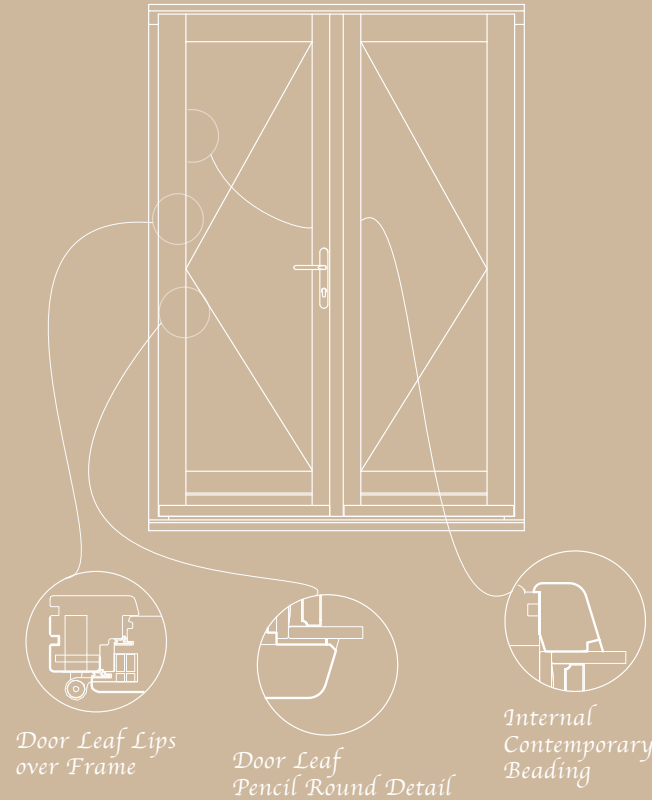

Contemporary French Door Lipped | RAL 9001 Cream | 25mm Bar

Contemporary French Door Lipped | RAL 9016 Traffic White | 9mm Lead

Traditional French Door Lipped | RAL 9016 Traffic White | 25mm Bar

contemporaryrange

Lipped French Door

Bring the outdoors in whilst creating a truly modern finish to any project with the Contemporary Lipped French door. The design is available in a number of single and double door leaf configurations with inward or outward opening options. The Lipped French Door gives you the versatility to maximise internal and external spaces.

Ideal for use in conservatories or garden rooms this modern design combines a Stormproof profile and sleek Pencil Round mouldings that match perfectly with other Contemporary Range products. With one of the thickest door leaves on the market at 68mm the design offers superior quality and a robust feel. High performance design options include thermally insulated panels, espagnolette locking, 3D adjustable hinges and Stormguard aluminium thresholds on inward opening designs.

Specification Ideas:

- Paint Finish: RAL 9010 Pure White
- Ironmongery: Satin Chrome
- Bar Pattern: None
- Unit Spacer: Silver
- Why not try: A Curved Fanlight

*Also available in the Traditional Range

Traditional Range

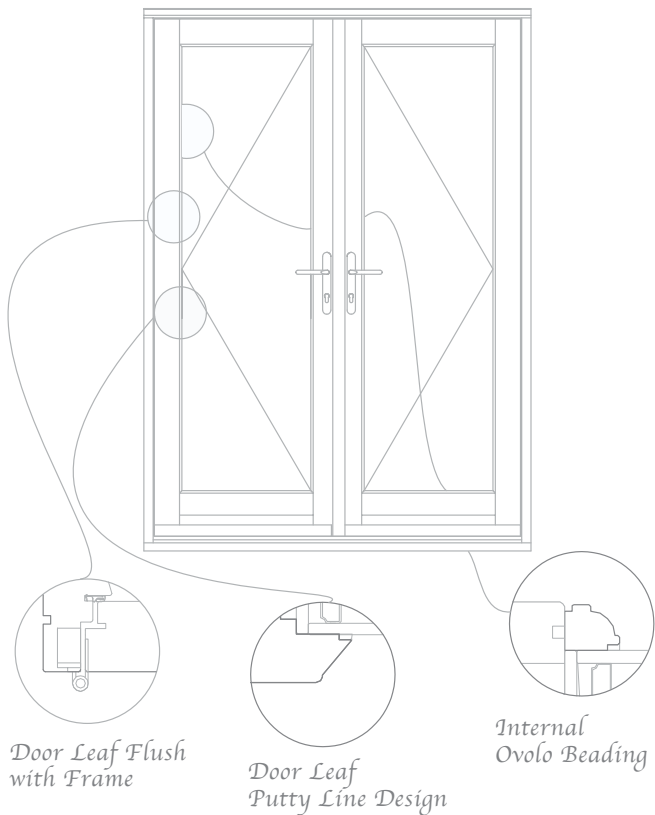

Flush French Door

The perfect way to introduce maximum light into any room; the Traditional Flush French Door can be designed to incorporate a number of single and double door leaf configurations. Available opening in where external space is limited on balcony areas or opening out to maximise internal living space, this versatile product can be designed to suit any project.

Period features including double handle and deeper panel profiling are combined with the latest 3D adjustable hinges, thermally insulated panels and high security espagnolette locking system. Perfectly complementing the Traditional Flush Casement, this product is suitable for conservation areas and ideal for enhancing traditionally styled sunrooms and orangeries.

Specification Ideas:

- Paint Finish: French Green
- Ironmongery: Antique Black
- Bar Pattern: Cottage Bar 25mm
- Unit Spacer: Silver
- Why not try: Balmoral Swan Handle, Polished Chrome

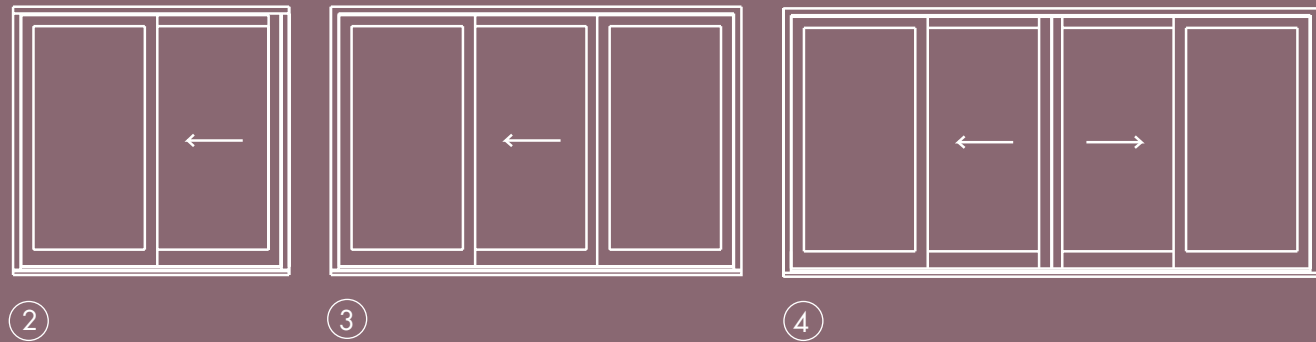

Contemporary Sliding Patio Door | RAL 9016 Traffic White | Ironmongery: Silver

Traditional Sliding Patio Door | RAL 9016 Traffic White | Ironmongery: Silver

Make the most of your living space

contemporaryrange Traditional Range

Sliding Patio Door

Sliding Patio Doors provide the perfect solution for creating vast open plan areas without encroaching on external space or clashing with interior furnishing. This design offers the ideal solution for creating large glazing areas with minimal timber allowing for uninterrupted views to be enjoyed from a property.

Available in both Contemporary & Traditional profiles this versatile design can be manufactured with single leaf sizes of up to 3 metres wide, offering an overall frame size of 6 metres for a double leaf configuration. An innovative lift and glide system allows the homeowner to slide large, heavy weight panels effortlessly. A low level threshold gives a seamless transition between indoor and outdoor living.

Suggested Specification:

- Paint Finish: RAL 7015 Slate Grey • Ironmongery: Silver • Bar Pattern: None • Unit Spacer: Warm Edge, Black • Why not try: A Dual Colour Finish

contemporaryrange **Traditional Range**
Folding Sliding Door

Exterior Folding Sliding Doors are without doubt the new vogue in indoor/outdoor living today. Perfect for connecting or partitioning an outdoor area, folding doors open and close effortlessly and stack unobtrusively to create wide open vistas.

Designs utilise the innovative Brio Top Roller Track System for smooth operation, ease of cleaning with locking technology to ensure panels remain set. Doors can be supplied outward opening from either the left, right or both sides. A unique Floating Door System is available on 4, 6 and 8 leaf units allowing door leaves to stack to the left, right or float in the centre. We offer the single largest folding screen on the market ideal for opening a whole façade in swimming pools and outdoor entertaining areas. Folding Doors are available with Contemporary or Traditional profiling to ensure consistent aesthetics throughout the property.

Suggested Specification:

- Paint Finish: RAL 9016 Traffic White • Ironmongery: Satin Chrome • Bar Pattern: None • Unit Spacer: Silver • Why not try: A Floating Door Model

Contemporary Folding Door | RAL 9016 Traffic White | Ironmongery: Satin Stainless

Folding Door Flush Bolts and matching handles are available in a choice of four premium finishes:

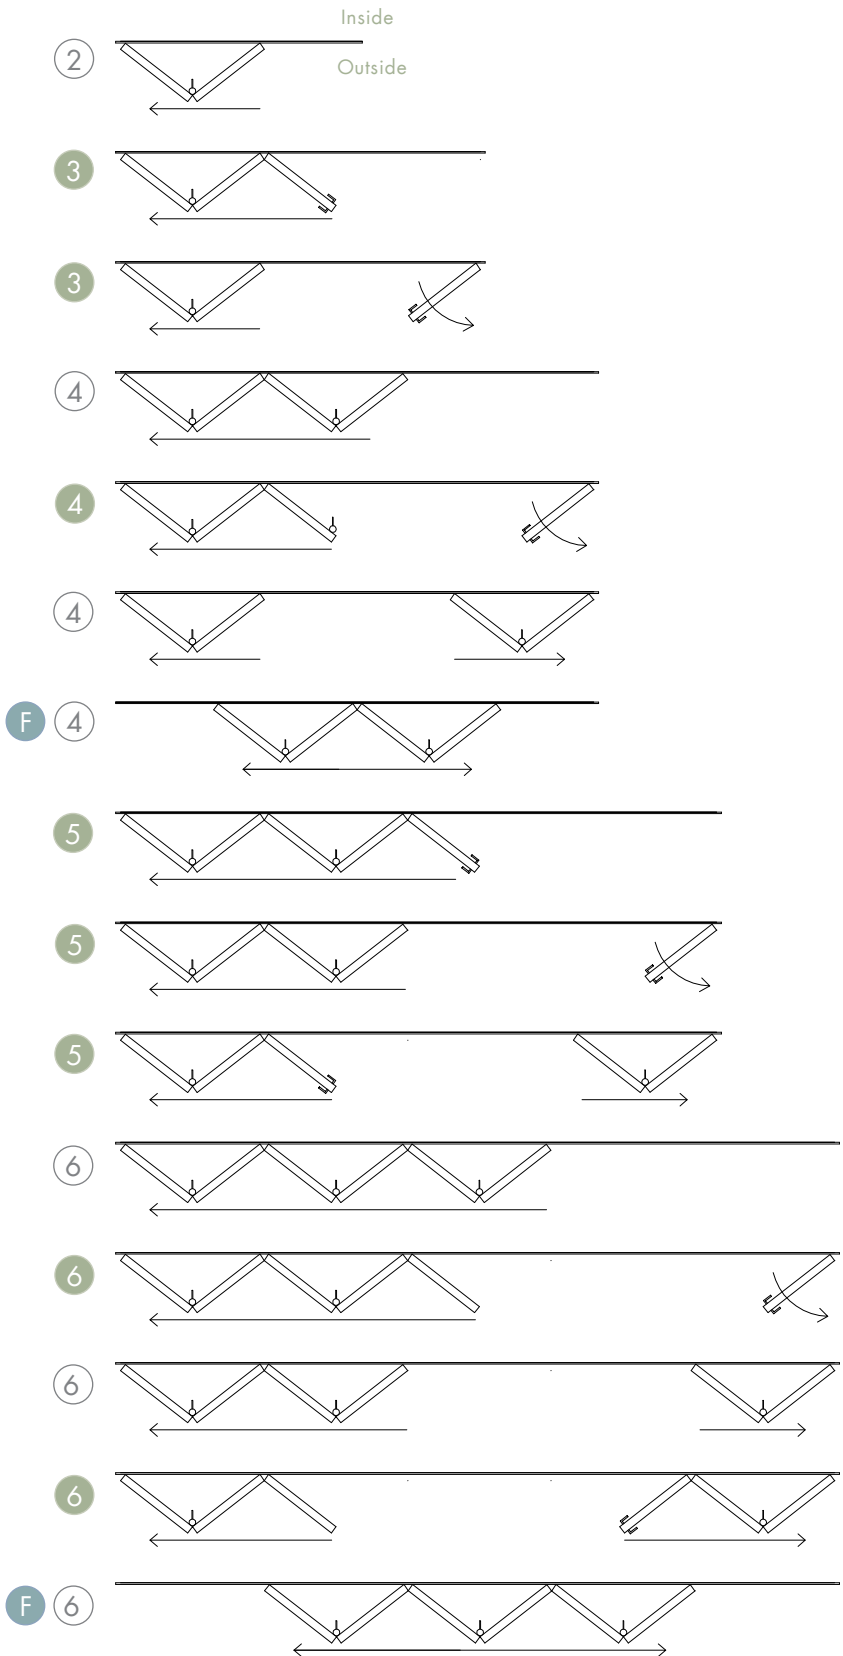

PVD Brass Polished Stainless Satin Stainless PVD Black

Embrace open plan living
by bringing the outdoors in

The beauty of the Folding Door is the creation of a seamless transition between inside and out bringing us closer to nature whilst making the most of natural light.

At Bereco we offer Folding Doors from 2 leaves up to 10 in a variety of configurations.

- Internal Grip Handle Only
- Internal Grip Handle + External Handle
- F Floating System

Sleek flush insulated leaf

A range of Contemporary Furniture

Heritage Range

A timeless collection of 10 sympathetically designed period door styles inspired by the distinctive traditional aesthetics of the Georgian, Victorian and Edwardian eras. The Heritage Door Range combines the latest modern security features, performance and technology whilst retaining the properties historical character and charm.

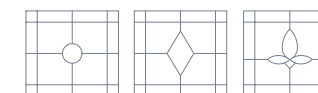

The most suitable colour finishes and choices of period ironmongery are carefully combined with leaded design options to replicate original aesthetics. Retaining period features is a particularly important consideration where buildings are listed and where specific conservation requirements must be met. Features include deeper timber panels, traditional external Putty Line design and internal Ovolo mouldings to replicate elegant period profiling.

Suggested Specification:

- Paint Finish: Farrow & Ball Elephant's Breath
- Ironmongery: Pewter • Bar Pattern: None
- Unit Spacer: Black Warm Edge • Why not try: Lead or Bevelled Glass

Thrum Mill, Rothbury. Featured on Channel 4's Restoration Man

Heritage Range

Specifically tailored for conservation projects

The Heritage Range has been specifically designed for listed buildings and where conservation approval is required.

Products are available with 4mm Single Glazing or 14mm Slimline Double Glazing options suitable for the most architecturally sensitive of projects where standard double glazing is not appropriate.

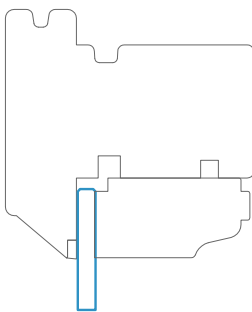

Designs incorporate period aesthetics utilising Lambs Tongue profile glazing beads, Putty Line mouldings with a range of Lambs Tongue glazing bars consistent throughout the range.

Suggested Specification:

- Paint Finish: Farrow & Ball Hardwick White
- Ironmongery: Black Monkey Tail
- Bar Pattern: 16mm Lambs Tongue
- Unit Spacer: White Warm Edge
- Why not try: Colour matched internal Architraves

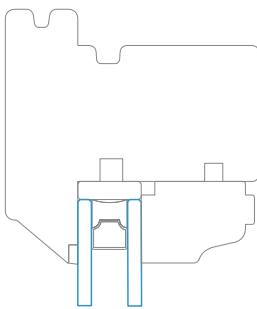

"The windows are fantastic, so quiet, brilliant."

George Clarke
Presenter of Channel 4's Restoration Man

Single Glazing - 4mm

Single glazing is often insisted upon where strict guidelines govern replacement situations.

Slimline Glazing - 14mm

Krypton filled as standard, this unit meets the need for traditional looking glazing, whilst importantly still achieving Part L compliance.

PRODUCTS WITHIN THE RANGE

• Flush Casement

The design replicates the original features of a wooden period window. Ideal for the most architecturally sensitive of projects where traditional double glazing is not deemed appropriate.

• Flush French Door

Offering the same period profiling as the Traditional Range whilst incorporating Single or Slimline Glazing, the design perfectly compliments our Heritage Flush Casement.

• Sliding Sash

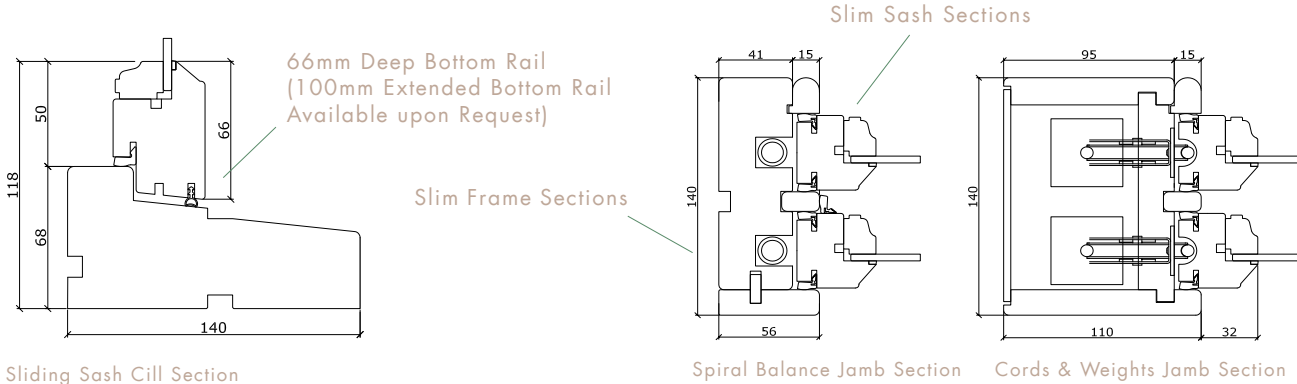

A Heritage Sliding Sash window design specifically tailored to have the slimmest frame section available on a modern window today. Not only is the frame depth reduced to only 140mm, the sash width is slimmer resulting in maximised glazing areas. The design is perfect for replicating old sash windows as they do not project into the room when behind a reveal.

- Spiral Balance

Featuring a semi-concealed pre-tensioned Spiral Balance combining modern operation with authentic period styling.

- Cords & Weights

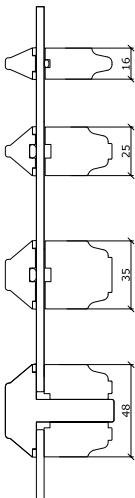

Utilising a traditional Cords and Weights mechanism this design is ideal for larger window openings or where external reveals are present.

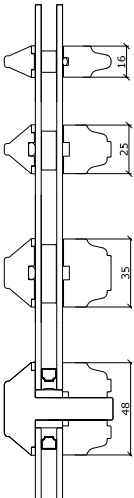

Lambs Tongue Bar

The Heritage Range features a selection of Lambs Tongue profile glazing bars available in a range of sizes to suit your design needs. Sizes are available in 16mm, 25mm, 35mm and a 48mm Solid Bar.

Single Glazing

Slimline Glazing

BERECO PRODUCT SPECIFICATION

All you need to know about our products

GENERAL SPECIFICATION

TIMBER

100% FSC engineered, defect free timber, responsibly sourced from well-managed, certified forests is used across the entire Bereco Product Range.

GLAZING

Products are supplied with Softcoat low-E argon filled double glazing as standard*. Laminated and toughened glazing is available to meet building regulations ensuring the home is safe and secure.

*See page 26 for Heritage Range specialist glazing

FINISH

Designs are supplied fully factory finished as standard; a four stage treatment process is utilised in the application of paint or stain ensuring consistent high quality throughout the product range.

BM TRADA

Bereco is a founding member of the BM TRADA Q Mark Scheme; a high performance licence offering peace of mind as all products are subject to the most rigorous quality control regime and will perform for many years to come.

BS7950 & PAS 23/24

Our products are certified to BS7950 and PAS 23/24 reflecting our commitment to ensuring the highest levels of safety & security.

KITEMARKED PRODUCTS

All Bereco products supplied with laminated (safety) glass are kite marked with the BS logo etched on to the glass.

WEATHER PERFORMANCE - BS6375

Products are tested to BS6375 which rates the weather performance of windows, providing a classification for weather tightness.

PEACE OF MIND

Purchasing new windows and doors is a significant investment in your home; they can increase value and change the whole appearance of any property. At Bereco we only supply products that are of the highest levels of security, performance and quality. Importantly we use only the most environmentally sensitive of materials - our 100% FSC® certification is testament to this.

Products are tested in independent UKAS laboratories with our partners Chiltern Dynamics and audited by BM TRADA. Having a test certificate is one thing, consistently manufacturing products to that level of performance and quality is quite another. Bereco is one of only 3 companies in the UK able to achieve such an award, where the criteria are set above all current building regulations.

Our standard product offerings are accredited to the highest standards on security and weather performance and include certifications in BS7950 and PAS 23/24 (see table below)

PRODUCT	BS6375/1/2*	BS7950*	PAS23/24**	BM TRADA Q MARK	FSC 100%

ENVIRONMENT

FSC

All products across the entire Bereco Range are manufactured using 100% FSC® timber, responsibly sourced from well managed certified forests. We use only the highest quality, engineered, defect free timber to increase product strength and ensure longevity.

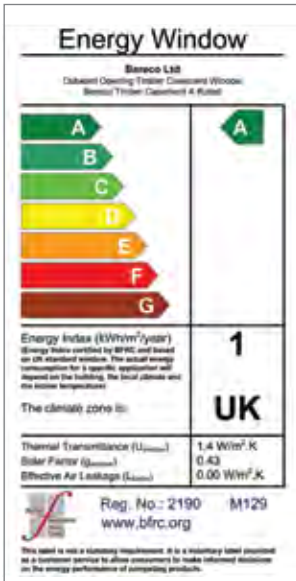

We support the introduction of the latest EU Timber Regulation (EUTR) which bans illegally harvested timber from being placed and sold on the EU market. The law now requires a record to be kept of timber supplier, product species, location of origin and amount bought. A risk assessment must also accompany this information to demonstrate the steps that have been taken to reduce the risk of purchasing illegally sourced timber. Our commitment to achieving only the highest possible FSC certification ensures complete traceability and transparency throughout our manufacturing process.

ENERGY

U-values should be an important consideration for any project. Both current and future Building Regulations strive to make new homes more energy efficient and U-values have a significant impact. The lower the U-value, the slower heat will transfer through an element, therefore possessing better insulation properties, keeping house hold bills (heating costs) to a minimum.

The U-value rating or 'overall heat transfer coefficient' measures the total amount of heat that transfers through a buildings fabric. Each element of a building has an individual U-value rating including brick/stone walls, roofing or building openings.

The units used to express U-values are Watts per m² Kelvin (W/m²K). To offer an explanation; Bereco's whole window U-value is 1.37W/m²K which means for every degree of a temperature difference between the air on the surface inside the window and air on the surface outside 1.37 Watts of heat would pass through any m². This calculation is based on standard glass 4/16/4 low-E argon filled units.

Although U-values are a fundamental part of the decision process when purchasing new windows and doors their main focus is on thermal transmissions based around the centre pane performance. The overall performance of the window should be based on a combination of factors which all contribute;

Points to consider;

U-VALUE

The lower the U-value rating the more energy efficient the product is. It should be noted that where a centre-pane U-value (ug) of less than 0.9W/m²K is specified triple glazing would be required to achieve this. Triple glazing is available on our Contemporary Range windows and doors.

WEATHER RATING

An excellent weather rating from third party, independent UKAS centres. All Bereco products are fully sealed and severe weather rated ensuring they keep drafts out of the home, even in the most extreme conditions.

UNIT SPACER

Made from materials with good insulation properties to reduce energy loss. Bereco offers aluminium or warm edge unit spacers manufactured using composite material to achieve optimum performance.

At Bereco we recognise the importance of achieving a balance between architectural sensitivity and window performance. Our product ranges have been specifically designed to incorporate energy saving properties without compromising on aesthetics. This, in essence, is the concept of our Heritage Range, offering a solution for conservation and listed properties with 14mm slimline glazing which looks identical to single glazing whilst saving energy at the same time.

GLASS SPECIFICATION

A variety of glazing options are available with a range of U-values and decibel ratings. Where noise reduction is a consideration Acoustic glass is available on request.

Glass Specification	Unit Size (mm)	Ug Value (W/m² K)	Decibel Rating (dB)
4/16AR/4T Std Float	24	1.1	31
6/20AR/6T Std Float	32	1.1	33
6/20AR/6T Std Float	24	1.2	34
4/14AR/6.5T Safety	24	1.2	34
6.5/12AR/6.5T Safety & Security	24	1.2	33
6.5/16AR/6.5T Safety & Security	29	1.1	33
6.5/20AR/6.5T Safety & Security	32	1.1	33

*Please refer to p.34-42 for glass specification across the product range

BFRC

The British Fenestration Ratings Council (BFRC) has devised a window rating equation based on values for these components. This rating is expressed as a number and is converted into a grade between A and G with A being the most efficient. Bereco have a range of energy ratings available, supported by BM TRADA certifications, which depend on the glass and spacer choice ranging from A-C. The window energy ratings are incorporated into the latest version of Part L Conservation of Fuel and Power Standard and are to become an increasingly referenced rating in specifications.

DESIGN

Window design, an art in itself

In design it is often the subtle, finer touches that can dramatically transform the appearance of an everyday object into a truly beautiful piece.

Flexibility and choice is paramount when selecting the perfect windows and doors to complement a properties interior décor and external façade. Our exclusive Product Range incorporates a wide variety of design options, offering the ideal canvas to create a truly bespoke finish to any property.

1 Choose your timber

Only 100% FSC engineered defect free, laminated timber is used across the entire product range.

A choice of 3 timber specifications offers flexibility and style:

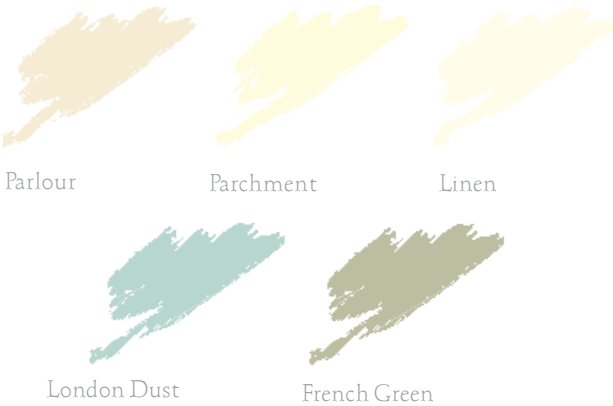

Softwood (Redwood) Hardwood (Dark Red Meranti) Oak (Solid Oak)

Larch Veneer is also available in the Creative Door Range

Try our exclusive range of Heritage Paint Colours

Perfect for complementing period window designs, colours are particularly suited to properties with a stone façade.

2 Paint it

Introduce a splash of colour with any BS or RAL paint finish to create a truly individual design statement. A comprehensive range of colour options can be selected, ranging from soft neutral tones to bright bold shades.

Stain it

A wide range of stain options are available combined with clear timber to achieve a seamless finish. Stain takes a slightly different appearance dependant on timber specification; grain appears much more prominent on hardwood where softwood results in a smoother finish.

Match it

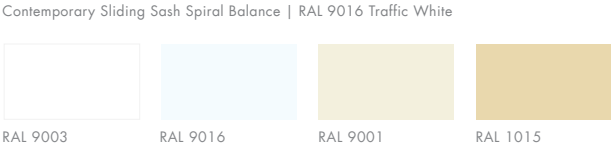

We can match any Farrow & Ball colour where a traditional finish is desired.

All Products Fully Finished as standard (30-40% Gloss)

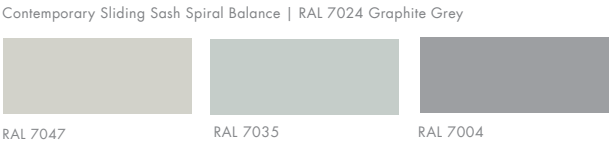

4 Stage Treatment Process:

- 1 Fungal Preservation Treatment
- 2 Coloured Sealer
- 3 Coloured Stain or Paint
- 4 A second coat of Stain or Paint

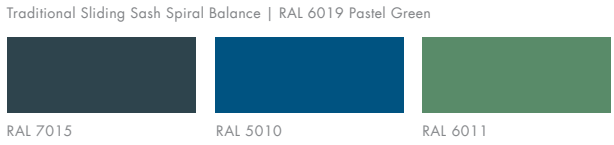

Simple yet Elegant with...Neutrals

Sleek & Subtle with ... Greys

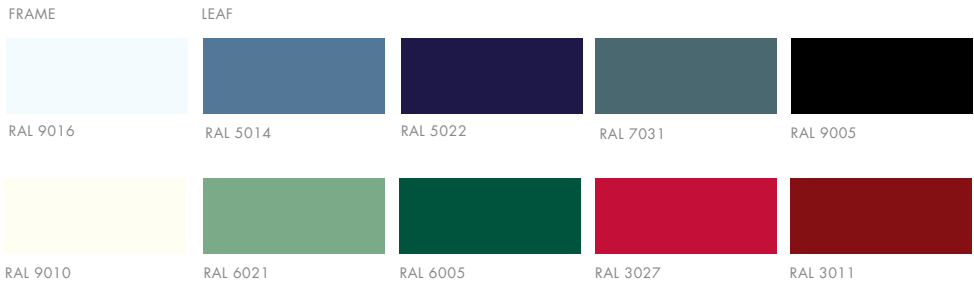

Go Bold with ... Brights

Frame it

Create a statement entrance with a range of contrasting frame and leaf dual colour options. The frame can be tailored to match the windows and accentuate the colour of the door leaf.

Dual Colour Available on all finishes

High Gloss 55% Available on all finishes

DESIGN

Window design, an art in itself

Glazing Patterns

Glazing is an important design element for any project and can make all the difference when creating a feature window or door. A variety of obscure glazing patterns are available with different designs offering varying privacy levels (rated 1-5, 5 being the highest level).

● Obscurity Level

5 Frosted

4 Stippolyte

5 Niagara

5 Cotswold

3 Chinchilla

4 Kocie

4 Kora

5 Delta

Contemporary Sliding Sash Spiral Balance | Obscure Glazing - Niagara

Customise your Glazing

Leaded Designs

Lead designs transform glazing into a work of art incorporated into a properties exterior. We can replicate traditional or completely bespoke lead patterns to suit your project. Our expert team offers design advice with drawings to help visualise how the final pattern will appear on glazing.

Choose from:

- Antique Black • Silver • Gold • Old Gold
- Available in 6mm and 9mm

Specialist glazing:

- Painted Glass • Stained Glass • Bevelled Glass
- Anti-Sun Glass • Self Cleaning Glass

Traditional Lipped Casement | 6mm Antique Black Lead

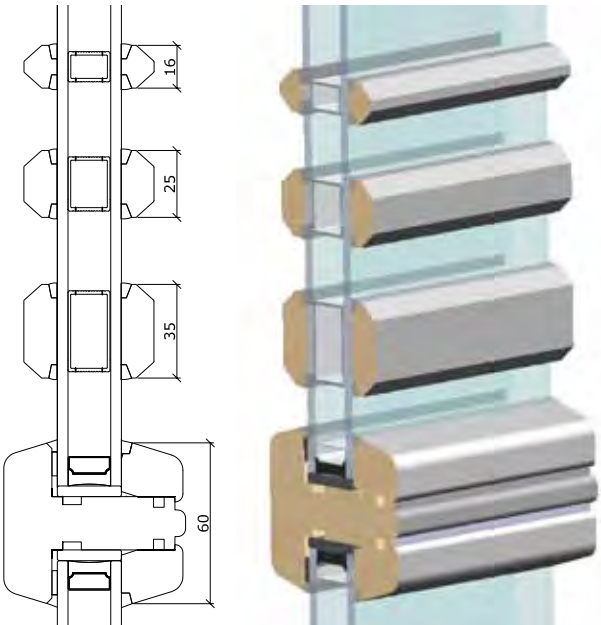

Glazing Bar Designs

Bespoke bar arrangements can be supplied to complement any window design without overpowering the windows original aesthetics. The beauty of timber is its versatility, lending itself to the most unique curved and arched bar designs, transforming the whole appearance of a facade. Bereco supply stick on bars with back to back unit spacers creating the illusion of separate panes of glass. Bars as slim as 16mm allow for elegant profiles.

Spacer Bars:

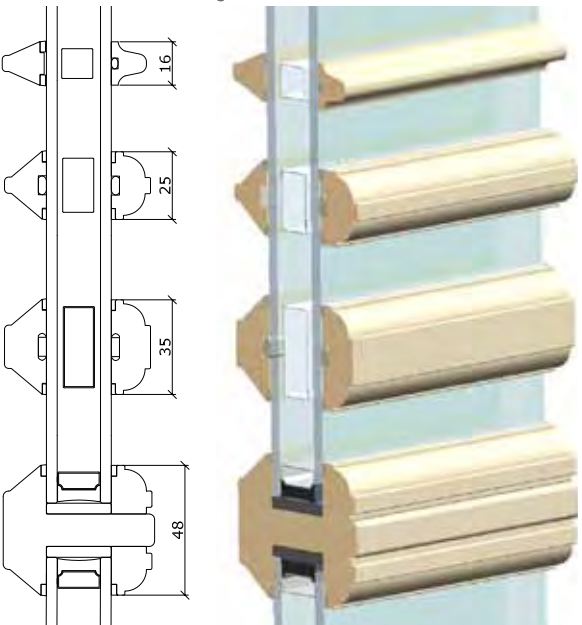

- Silver (Aluminium) (std)
- White (Warm Edge)
- Brown (Warm Edge)
- Black (Warm Edge)
- Grey (Warm Edge)

contemporaryrange

Heritage Glazing Bars can be found on p. 27

Traditional Range

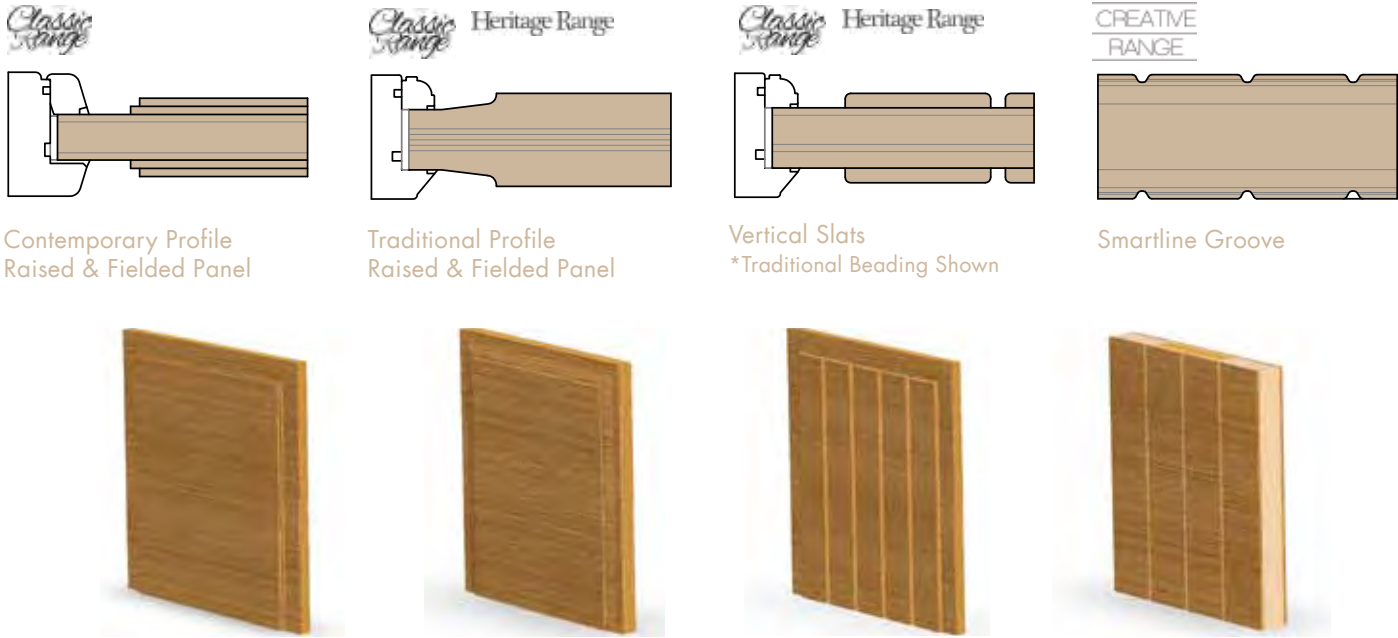

DESIGN

Window design, an art in itself

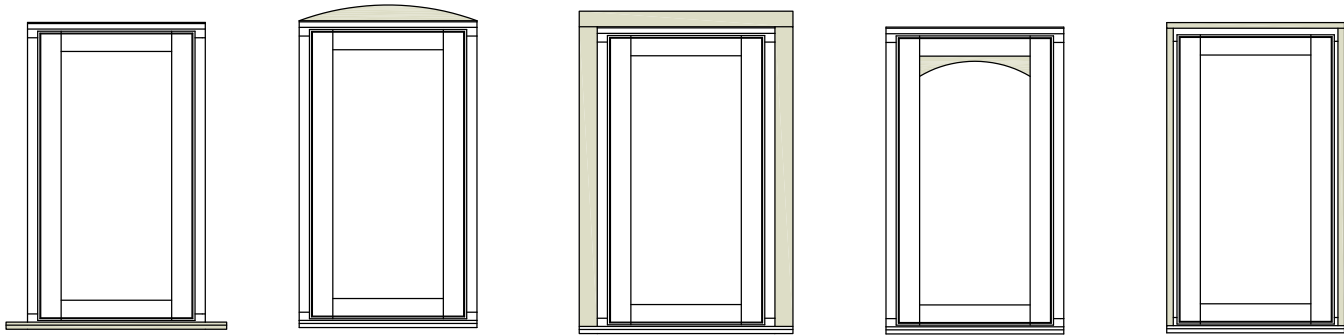

Door Panels

Entrance Doors are PAS 23/24 certified and incorporate a 68mm thermally insulated door leaf as standard. An extensive range of panel designs are available across all ranges to create a wide range of unique styles. Deeper panels on the Heritage and Classic designs in the Traditional profile replicate the elegant profiling of original timber doors.

Finishing Touches

Unlike many others in the market we offer a diverse range of finishing touches designed to save time during installation and further enhance the appearance of the window. Supplied factory finished as standard, this ensures the final result is one of quality and consistency.

- Cill Horn

Extends either side of the window retaining external character.
- Arched Packer

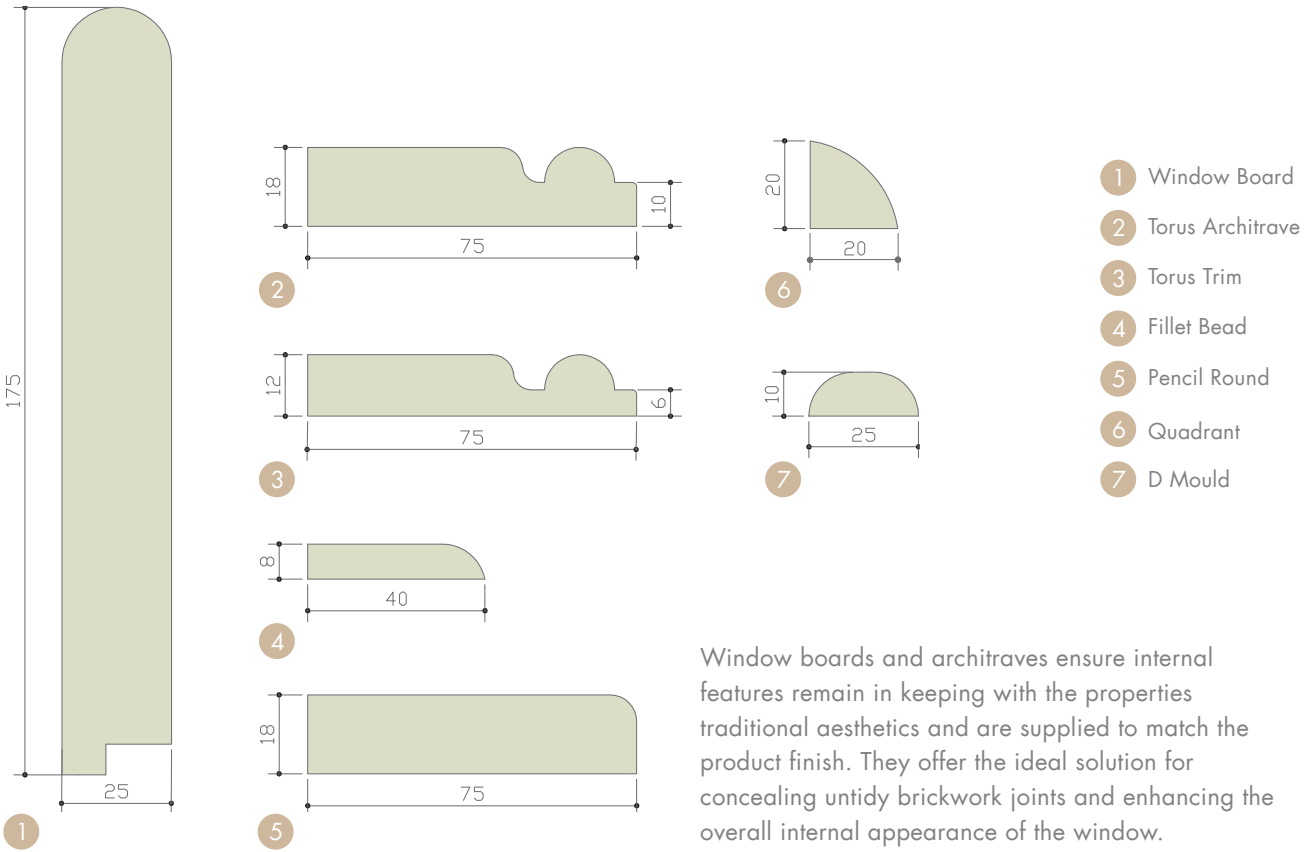

Where infills are required to an arched lintel to create a curved head.
- Packer

For use where a reveal is present or where render returns onto the window.
- Curved Plate

To give the appearance of cued glass within a window or door.
- Cheeks

Ideal for dormer windows or where tile hanging is featured.

Internal Finishing Touches

Window boards and architraves ensure internal features remain in keeping with the properties traditional aesthetics and are supplied to match the product finish. They offer the ideal solution for concealing untidy brickwork joints and enhancing the overall internal appearance of the window.

Those Little Extras

Bereco offers a variety of additional ancillary items including cavity closers, fixing packs and maintenance products. Cavity Closers ensure window openings are ready for installation whilst fixing packs enable quick and easy fitting. Regular maintenance helps prolong product life and ensures warranties are maintained.

- Cavity Closer

Cavity Closers are the simplest, most effective way to seal cavities around wall openings and provide a rigid window or door frame template. As well as acting as a brickwork former, they enhance thermal efficiency, create a damp-proof course and prevent thermal bridging in accordance with Part L regulations.
- 3 sided insulated Cavity Closer
 - Cavities between 50mm-300mm
 - Easy to install
 - 12 brick ties per item included
 - Thermally efficient
 - Prevents cold bridging

- Fixing Pack

At Bereco we recommend the use of fixing packs ensuring all components are to hand, enabling quicker installation.

- Maintenance Product

Our special clean and care system will restore shine to windows and doors whilst improving performance and maintaining all important warranties.

IRONMONGERY

Its all in the detail

Ironmongery choice can dramatically enhance the overall appearance of any window or door design whilst adding unique style to a property. We offer a diverse collection ranging from contemporary Italian designs to antique old English period styles. The images below showcase an inspirational selection of furniture to complement both external aesthetics and interior décor.
